EDUCATION

Georgia State University

Atlanta, GA

Bachelor of Science in Computer Science; GPA: 3.96/4.00

May 2022 – May 2025

- Coursework: DS & Algorithms, Machine Learning, Software Development, Big Data, Deep Learning, Data Science

EXPERIENCE

Georgia State University

Atlanta, GA

Research Assistant — REU Sponsored | ML, Neural Network, Graph Embedding

September 2023 – December 2025

- Developed graph compression techniques, enhancing the handling of simple graphs leading to up to 70% reductions in node embedding time without loss of node classification accuracy.
- Co-authored a paper titled "Exploring Similarity-Based Graph Compression for Efficient Network Analysis and Embedding," which was accepted into 33rd ICCCN 2024 at Big Island, Hawaii.

Amazon Web Services

Dallas, TX

Cloud Engineer Intern | AWS, Networking, Linux, OS, Kubernetes, HAWA

June 2024 – Aug 2024

- Gained hands-on experience with all AWS services, such as EC2, S3, RDS, CloudWatch, etc.
- Managed and enhanced cloud solutions across AWS services, improving system availability and resource efficiency.
- Earned AWS Certified Cloud Practitioner and Solutions Architect certifications, demonstrating deep knowledge in cloud architecture and security.

Signify

Peachtree, GA

Data Scientist Intern | Analysis, Data Pipeline

February 2024 – May 2024

- Leveraged historical data to analyze performance metrics, identify key trends, and inform product improvements.
- Collaborated with cross-functional teams to implement predictive models that forecasted system performance.
- Developed and automated data pipelines using Python and SQL for efficient monitoring and reporting, reducing manual work by 40%.

Georgia State University

Atlanta, GA

Teacher Assistant | Canvas, Powerpoint, Tutoring

February 2024 – Present

- Assessed student performance through grading assignments and exams, and offered constructive feedback to help students understand material and improve their skills.

Maron AI

Austin, TX

Software Engineer Intern | Agile, Web Dev, Data Pipeline

May 2023 – August 2023

- Engineered APIs and backends for user data management, harnessing AWS Lambda to enhance performance by 35%.
- Implemented microservices architecture using Node.js and Express, resulting in a 40% improvement in system scalability

SKILLS

Languages & Technologies: Python, HTML/CSS, Java, JavaScript, TypeScript, SQL, PowerShell, Pytorch, NumPy, Pandas, Node.js, React.js, AngularJS, MATLAB, Git, Bash, NoSQL, Hadoop, Apache Spark, C/C++

Tools & Concepts: AWS, Canva, CUDA, Data Analysis, Graph Machine Learning, Flask, Figma, Agile, JIRA, JUnit, Kubernetes, Linux/Unix, MongoDB, React Native, REST APIs, Selenium, Software Testing, Wireshark

PROJECTS & PUBLICATIONS

Real-Time Collaboration Platform with CRDTs

- Developed a real-time collaborative text editor supporting multiple users editing simultaneously with seamless conflict resolution using Conflict-free Replicated Data Types (CRDTs).
- Engineered a backend architecture with Node.js and WebSocket for low-latency data synchronization.
- Deployed the platform on AWS with auto-scaling, maintaining high availability and efficient resource utilization.

Predict Diabetes Possibility Web App

- Developed a website utilizing a RandomForest classifier for diabetes prediction, based on user-inputted health data.
- Implemented a real-time data submission via Fetch API and instant display of diabetes probability.

Resume to Job Matcher Web App

- Co-led the development of an advanced generative AI system to match resumes with job descriptions.
- Provides a unique compatibility score out of 100, enabling precise and efficient candidate-job matching.

Study Buddy Chatbot for Collaborative Learning

- Created an intelligent chatbot that helps students study by summarizing notes and answering questions using GPT-based NLP models.
- Implemented group study features, allowing users to collaborate and share notes to each other in real-time.
